## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-10 and 13-27, drawn to a tubing set, classified in class 604, subclass 4.01.
- II. Claims 11 and 12, drawn to a method of using a tubing set, classified in class 604, subclass 500.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case product can be used in a different process. The product claims are drawn to tubing sets with components for suppressing pressure pulses. The method is one of generating oscillatory flow via periodic occlusion. The tubing need not be used to generate oscillatory flow, and in fact, is designed to counter the pressure pulses that would occur with oscillatory flow. However, this pulse suppression would be useful to suppress Unintended spikes in pressure as well.

**See Species on next page.**

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A: a movable ball shown in figure 11;

Species B: a duckbill valve shown in figure 15; and

Species C: the arrowhead device shown in figure 17.

Note that the flexible tubing that changes cross-sectional area in response to pressure changes appears to be a subcombination useable together with these other pressure pulse suppression devices. However, the claims are not drawn purely to this flexible tubing, but rather to the whole set having such tubing (claim 1). Therefore the variable cross-section tubing has not been included as a restricted species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 5, 14, and 20 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
